Need to Reduce Humidity? Choose HRV

Do you need to lower humidity? Do you live in an area where winters are mild? Then the DC40 HRV is the right solution for you. This decentralized ventilation unit with heat recovery features a dehumidifying exchanger that operates efficiently in temperatures ranging from -10°C to 45°C.

The result is a reduction in relative humidity, which helps prevent issues such as mold growth, microbial development, and unpleasant odors. The HRV dehumidifying exchanger is commonly used in high-humidity areas, such as moldy room walls, damp basements, or spaces where maintaining optimal conditions is essential.

If humidity and mold are causing you trouble, but you don't live in a region with harsh winters (such as mountainous areas), the HRV exchanger is the ideal solution for your problem.
